John Molton joins Hi-Spec Engineering

To meet the demands from increased sales within the UK and the continuing expansion of its dealer network, Hi-Spec Engineering Ltd has announced the appointment of an additional area sales manager.

John Molton, who joined the company in April, will be responsible for sales support throughout East Anglia, covering an area from Hull southwards, and the South East across to Southampton.

John brings to Hi-Spec an extensive knowledge of both diet feeders and feeding systems for livestock, plus considerable experience in slurry and manure handling.

John attended Sparsholt College in Hampshire and spent the early part of his career working as the arable manager for the ADAS Bridget's Experimental Husbandry Farm near Winchester. Here, part of his role included working on projects studying the spreading and injection of manure and slurry from the farm's dairy herd.

More recently, John has developed considerable experience in diet feeders and joins Hi-Spec Engineering from JF-Stoll UK Ltd.

"As a livestock specialist, one of the big strengths and attractions of Hi-Spec for me is the fact that they are a very livestock orientated, farmer-focussed company, and that diet feeders and muck handling machinery forms the core of the company, rather than being just part of a more extensive, general machinery product range," explains John.

"There is a strong product range and I look forward to working with the existing dealers within the eastern and southern area and will be looking to expand the dealer coverage with new appointments."
